

Directions for “Do Your Own Estimate Page” for Police Officers

To use this feature to calculate a DROP estimate, you must first calculate your regular service retirement benefit below.

- As you scroll down, you must insert data:
- The year and month you were born
- The year and month of your membership date
- Average annual salary

At this point, if you skip over “planned retirement date” and click “Calculate”, your earliest retirement date will show in the line below the “Calculate” button.

From this point, enter your planned retirement date, using desired year and month. You can project salary information as you choose.

Click on “Calculate” again and you will see information on your estimated regular service retirement benefit appear in the fields below.

Below this information, under the DROP heading, you may enter variable data for potential annual salary growth and anticipated COLA percentages. Once you have entered this data, scroll farther down and click on “Calculate DROP” and your DROP options will appear in the fields below.
